## Peak Performance

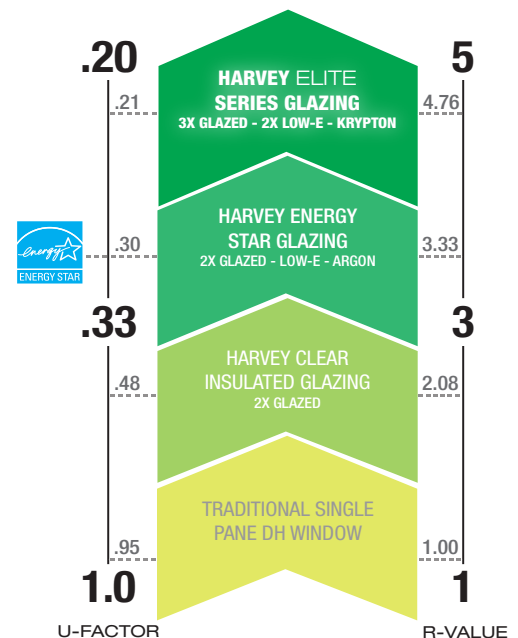

Replacement windows are a considerable investment in the energy efficiency and comfort of your home. Therefore, it only makes sense to install windows that will provide consistent performance from year to year. Harvey **ELITE** Series windows are made to exceed ENERGY STAR requirements with a U-Factor of 0.21 or better and are built to last.

**The Panes:** Triple glazing offers the maximum efficiency available, as additional air pockets have better insulating properties and create a better sound barrier.

**The Gas:** Krypton provides the ultimate insulator for thermal performance. It is a colorless, odorless, inert gas that augments our 3x glazing system.

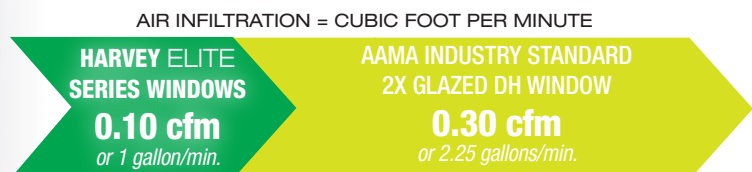

**The Glass:** Double Low-E coating enhances thermal performance by leveraging the angle of the sun's rays to retain heat in the winter months and prevent heat gain in summer.

**The Spacer:** Our warm edge glazing system utilizes two spacers which, when heated and fused to the glass, creates a durable seal.

## Increase Comfort and Save Money

Air infiltration is an important, yet widely overlooked, component of overall energy efficiency. Simply put, it's how much air seeps into a home through a closed window. The lower the number the better, because rate of air exchange in a room has a big impact on energy use and comfort (draftiness).

Harvey's quality materials, advanced window design with integrated weatherseals, and the special care Harvey takes during the manufacturing process, all come together to yield resilient long-lasting performance that pays off year after year.
